What is the RCR?

Researchers have important professional and regulatory responsibilities related to the Responsible Conduct of Research (RCR), which is broadly defined as the practice of scholarship and scientific investigation with integrity. UCCS takes RCR training very seriously and such training is required for most federally funded trainees. RCR is essential to ensuring faculty, staff, students, and postdoctoral researchers engage in research with the highest of standards. By completing 8 RCR sessions (offered throughout the year), participants will receive a Certificate of Completion documenting your training hours!
